EcoInventions™

NEW AND IMPROVED!

WELCOME!

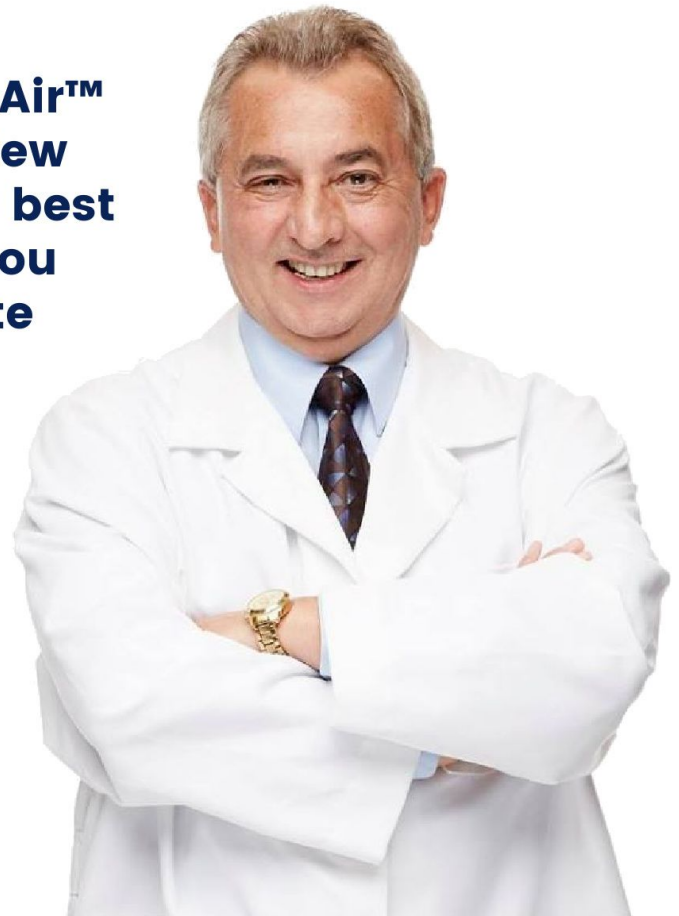

We are excited to get you started on your journey to safer and healthier indoor air with your new SafeAir™ Mini X2 Air Purifier from EcoInventions!

If you are looking for an easy to use and compact solution to fight odors, attack allergens, and renew your stuffy, stale, indoor air – then we know you're going to love the rapid results and overall "fresh air feeling" that SafeAir™ Mini will bring to your home!

Before you start using your SafeAir™ Mini X2, please take time to review this user manual to achieve the best results, and learn all the ways you can use your air purifier to create a healthier home!

"YOU ARE GOING TO LOVE YOUR AIR – I GUARANTEE IT!"

– Julius Toth, Air Purification Expert and Product Inventor

GENERAL OPERATION

1 - Remove the air purifier from the box and discard plastic cover. Inspect the air inlet and air outlet areas to make sure there is no tape or plastic remaining.

2 - For best results, use the included USB adapter and place the purifier in an area 3-5 feet above the floor, or you can plug the unit directly into an AC power outlet.

3 - Once attached to a power source, the power button will illuminate in **RED to indicate that the unit is in STANDBY MODE.**

4 - Tap the power button once to activate the device. It will default to NORMAL OZONE MODE, indicated by one, two or three **BLUE lights illuminated on the control panel.**

5 - Adjust the settings by tapping the power button:

- **ONE (1) BLUE LIGHT BAR = LOW**
- **TWO (2) BLUE LIGHT BARS = MEDIUM**
- **THREE (3) BLUE LIGHT BARS = HIGH**

6 - After cycling to the lowest setting, tap the power button again to activate the added PLASMA TECHNOLOGY in addition to the ozone, indicated by the bottom light bar turning **PURPLE.**

GENERAL OPERATION (*Continued*)

7 - To activate 50% OZONE MODE for less ozone concentration, press and hold the power button for 2 seconds. A **GREEN** power light will illuminate once 50% OZONE mode is active.

8 - Adjust the settings by tapping the power button:

- ONE (1) **GREEN** LIGHT BAR = LOW LEVEL
- TWO (2) **GREEN** LIGHT BARS = MEDIUM LEVEL
- THREE (3) **GREEN** LIGHT BARS = HIGH LEVEL

9 - After cycling to the low setting in 50% OZONE MODE, tap the power button to activate the added PLASMA TECHNOLOGY in addition to 50% OZONE, indicated by the bottom light bar turning **PURPLE**.

10 - While in 50% OZONE MODE, press and hold the power button for 2 seconds to activate SLEEP MODE. Once SLEEP MODE is activated, only 1 **PURPLE** light bar will illuminate and the unit will operate with PLASMA TECHNOLOGY only.

11 - To exit SLEEP MODE and return to NORMAL OZONE MODE, Press and hold the power button for 2 seconds and then follow normal instructions to choose your desired operating mode.

The operating modes cycle in the following order when holding the power button for 2 seconds: NORMAL MODE > 50% OZONE MODE > SLEEP MODE (PLASMA ONLY)

SPECIFICATIONS

Product	Air Purifier
Model	SA-MX2
Coverage Area	650 SQ FT
Power	AC 110-240 V ; DC 5V
Energy	<5 WATT
Unit Size	5.5 x 3.6 x 2 IN.
Unit Weight	0.68 LB.
Ozone Output	0-50 MG/HR
Plasma Output	5x10⁶pcs/CM³
Noise Level	30 - 55 dB

SAFTEY GUIDELINES

Keep out of reach from children and do not allow children or pets to tamper with the purifier, USB powercord, or the protective plastic packaging.

SafeAir™ Mini X2 makes a great addition to your bathroom, but we recommend keeping the unit away from areas of extreme humidity to extend the life of the unit.

Like many home electronics, your SafeAir™ Mini X2 should be unplugged and stored in a safe place anytime you are away for an extended period of time.

MAINTENANCE

SafeAir™ Mini X2 requires no replacement cartridges or costly filters. However, the air inlet and outlet should be checked for build-up periodically and cleaned as needed to extend the life of the unit.

To clean the air inlet and outlet, simply wipe with a dry cloth or use a vacuum cleaner crevice tool or attachment brush to gently clean the openings to remove dust or hair that may have built up. Do not blow air into the unit or use water to clean.

WARRANTY SERVICE

SafeAir™ Mini X2 is backed by a 1 year warranty from the date of purchase. If your unit should fail to perform as promised - or for any other product related questions - please contact EcoInventions Customer Service at 800-599-5191, or visit www.ecoinventions.com

Please note that warranty claims cannot be validated without a receipt copy or other proof of purchase.

PUT IT TO THE TEST

10 SIMPLE PURIFICATION FEATS FOR HEALTHIER INDOOR SPACES

DID YOU KNOW that many health problems could be related to indoor air quality? Americans spend about 90% of their lives indoors where dust, allergens, germs, viruses, and mold can build up within the confines of buildings and homes. Although the effects are not always immediately noticeable, the pollutants that fester in your indoor air can contribute to conditions like asthma, allergies, skin irritations, fatigue, and even cancer.

Grab your SafeAir™ Mini X2 Air Purifier and take your typical cleaning routine to the next level with these 10 Customer Approved Purification Feats to demonstrate immediate results and help expedite the purification process for your home, vehicle and more!

PURIFY YOUR AIR VENTS

Ventilation and HVAC systems are the "lungs" of your home, and it's important to keep them clean. Follow the steps below to use to give your home a breath of fresh air!

- 1) Place your purifier directly in front of and facing the cold air return or intake of your ventilation system. You will need to use the USB cable or an extension cord to do this.**
- 2) Turn the air purifier on and adjust to the highest ozone level setting.**
- 3) Turn on your heating/cooling system fan from your wall thermostat.**
- 4) Allow this setup to run undisturbed for at least 12 hours to refresh your home's ventilation. If you have multiple units, you can repeat this set up throughout your home.**

***PRO TIP* - Untreated duct work can cause breathing disorders and other health issues. Include this process into your seasonal deep cleaning routine to keep your ventilation system and your family healthy.**

SANITIZE YOUR MATTRESS

How much is a good sleep worth? Using your Safeir Mini to purify your mattress has the potential to give you the best night's sleep ever! Give your bed that just washed feeling with these simple steps:

- 1) Pull the blankets back to expose the mattress and position your purifier at either the foot or head of the bed. You may need to use the USB adapter or an extension cord to power the unit for this process.**
- 2) Turn your air purifier on and adjust the control dial to the maximum setting.**
- 3) Cover your purifier and bed with a light sheet to make a "tent" over the entire bed. Close the door of the room and allow the purifier to run for 2-4 hours.**

PRO TIP - A good sleep is essential, and sometimes irritating indoor air pollutants can keep us from getting a good night's rest. Operate your air purifier on SLEEP MODE (See Page 8) while you rest to help remove allergens from your bedroom so you can breathe easy and wake up feeling refreshed!

MOLD BLAST YOUR BASEMENT

The activated oxygen that is released by SafeAir™ Mini X2 is a natural mold eliminator. This process will amaze you as your nasty, moldy and mildew smelling basement is transformed and rejuvenated.

- 1) Place your purifier in the center-most area of the basement about 5-6 feet above the floor or as high as possible.**
- 2) Turn the air purifier on and adjust the to the highest ozone level setting.**
- 3) Place an additional fan in the room if necessary to circulate the activated oxygen to every corner of the basement if the airflow is stagnant.**
- 4) Allow this set up to operate for 6-8 hours for mild/moderate problems, or 2-4 days under supervision for serious mold and mildew.**

***PRO TIP* - Remember not to let your purifier operate in an area with excessive moisture or humidity. Keep the unit off the ground and as close to the ceiling as possible. You may need to run a dehumidifier first if the basement environment is very damp.**

CLEANSE YOUR BATHROOM

Flush the germs down the toilet! This step can help reduce that nasty mold and mildew, as well as help you keep those gross, infectious germs and bacteria from taking over your bathroom, and leave it smelling fresh!

- 1) Place your air purifier in a central area of the bathroom, like a dry countertop. Be sure to keep it off of the floor, away from water or wet towels.**
- 2) Turn the air purifier on and adjust to medium or high level depending on the size of your bathroom area.**
- 3) Close your bathroom door and allow the air purifier to purify the space for at least 2 hours.**
- 4) To allow freshness on a regular basis, simply plug in your SafeAir™ Mini X2 into a bathroom power outlet and set the dial to a medium level.**

***PRO TIP* - Don't forget that too much moisture or humidity can harm your air purifier. Never operate the purifier while bathing or showering. Wait until all steam and humidity has subsided before reinstalling.**

FRESHEN YOUR FABRICS

This step can help you eliminate that stale, musty smell from your closets and other storage spaces, as well as help oxidize harsh chemical toxins from your clothing after washing with laundry detergent or dry-cleaning services.

- 1) Place your air purifier in the center of the closet, as close to the ceiling as possible. You will need to use the included USB power cord or an extension cord to power the unit.
- 2) Turn on your air purifier and adjust to a medium level setting for small closets, or high level setting for walk in closets or larger storage spaces.
- 3) Close the door of the closet or storage space and allow this setup to run for 2-3 hours, depending on the storage volume of the space.

PRO TIP - For direct purification and odor removal on a specific article of clothing, put the item in a garment bag or a box and place the unit inside the bag. Attach your purifier to a power source and adjust the dial to a medium level setting for 10-15 minutes.

DEODORIZE STINKY SHOES

Stinky feet and shoes are no match to the odor fighting power of SafeAir™ Mini X2 Air Purifier! As another fan favorite, this step is an easy and fast way to eliminate the stench from your gym shoes or work boots!

- 1) Place your smelly shoes or boots inside a shoebox or any other small enclosed space like a box, bin or suitcase.**
- 2) Attach your air purifier to the included USB power cord, or an extension cord and place the purifier inside of the box along with your shoes or boots.**
- 3) Turn the air purifier on and adjust the settings to the highest ozone level.**
- 4) Allow this process to operate for 30-60 minutes, depending on odor level, allowing the powerful fresh air molecules to saturate your smelly shoes.**

***PRO TIP* - Does your gym bag reek? Instead of a shoebox, simply place your SafeAir™ MINI X2 purifier inside your gym bag to remove the odors left behind by shoes or workout clothes.**

KNOCK OUT THE TOXINS

The process of refreshing your home's look can often come with a big mess! This purification feat can help reduce and eliminate those extremely hazardous toxic fumes and dust created in your home during and after you paint, lay carpet, or install cabinetry.

- 1) Place your air purifier in the center-most area of the room and off the floor. You will likely need to use the USB cable or an extension cord to power the unit.**
- 2) Turn on the purifier and adjust the dial to a maximum level setting.**
- 3) If possible, place a fan in the room to help circulate the activated oxygen to every corner of the room.**
- 4) Allow this set up to run as long as needed until the smell and fumes from your remodeling has diminished.**

PRO TIP - While your air purifier can help to reduce toxins once the job is done, be sure to use precautions such as masks, or other forms of ventilation while working with paint, dust and fumes.

TAME YOUR PETS ODORS

Wet dog? Stinky litter box? Your SafeAir™ Mini X2 Air Purifier has got you covered. Although our pets are part of the family, their odors can be less than loveable. This purifying feat is a customer favorite and helps eliminate the often obnoxious smell that can be left behind by our furry friends.

- 1) Place your air purifier in front of the affected area as closely as possible. Common problem areas can be around the litter box, pet beds, furniture, or near your pets crate or carrier.
- 2) Turn on your air purifier and adjust to the highest ozone level settings.
- 3) Run the purifier for 2-12 hours depending on the potency of the odor. Let your nose be the judge!

PRO TIP - Accidents happen. To purify a stinky spot, create a “tent” over the area (See “Sanitize Your Mattress” Instructions). Remember to leave the back of the purifier open to allow air to come to it and produce activated oxygen to fight stubborn odors.

REFRESH YOUR RIDE

Practicing this simple purification feat can help reduce that stale smell your car gets as it ages, as well as help eliminate stubborn odors left behind by a smoker or a pet passenger.

- 1) Plug your air purifier into your car's USB outlet and place it on the front seat, dashboard or center console.
- 2) Adjust the settings to medium or high ozone level, depending on the size of the vehicle.
- 3) Turn on your vehicle's air conditioning to help better circulate the purifying molecules throughout the space.
- 4) Allow this setup to operate while the vehicle is unoccupied for 30-60 minutes.

PRO TIP - Follow this purifying process on all of your vehicles - from boats to RVs, SafeAir™ Mini X2 will help eliminate odors and germs and keep your spaces fresh!

PURIFYING ON THE GO

While your hotel or rental space might appear to be clean, there are potentially millions of hidden germs, bacteria and viruses lurking in the air and on surfaces. Take advantage of the compact size of SafeAir™ Mini Air Purifier and take it along on all your vacations and adventures!

- 1) Pack your SafeAir™ Mini X2 Air Purifier in your suitcase or backpack - Don't forget the USB power cord!**
- 2) Follow the instructions for the previously listed purification feats to sanitize the mattress, bathroom, or simply just plug it in and adjust to appropriate level control settings based on the room size.**
- 3) Spread the word about SafeAir™ MINI X2 to friends, family and those you meet along your journey!**

***PRO TIP* - Don't get too comfortable in your hotel room! One study published in Scientific American magazine found that approximately 81% of common surfaces swabbed in a hotel room had at least "some" fecal bacteria. Take a few minutes to disinfect before settling in.**

INVENTOR Q+A

**EcolInventions™ CEO
and Product Inventor
Julius Toth answers
our customers' most
common questions
about SafeAir™ Mini
Technology**

How Does SafeAir™ Mini Work?

The new and improved SafeAir™ Mini X2 Air Purifier was designed as a compact, portable, and affordable way to create a cleaner indoor environment. SafeAir™ Mini uses micro technology to restore polluted air by electronically producing purifying properties, similar to those found in nature. By simply plugging it in and turning it on, SafeAir™ Mini takes the stale, polluted air from your space and re-energizes it with healthy air elements. This energized air is then dispersed back into your space, putting the generated elements to work. These elements not only help to destroy odors, but also cause microscopic particles, such as dust, and dander to "fall" from the air, effectively reducing the level of pollutants in the air we breathe.

What are the Featured Benefits of the Technology?

By harnessing the power of micro-technology, SafeAir™ Mini X2 replicates the natural cleansing powers of a thunderstorm to electronically generate molecules and super oxygen ions to restore indoor polluted air. Combined with the power of Plasma Technology SafeAir™ Mini X2 virtually scrubs your indoor air clean of floating particulates while destroying volatile organic compounds, odors, allergens and more!

- Easy to Use – Just Plug In, Power on and Purify!**
- Effective – Works rapidly to purify indoor spaces up to 650 Square Feet in a matter of minutes.**
- Powerful – Attacks stubborn odors, allergens and mold from indoor air, furniture and fabrics.**
- Portable – Fits in the palm of your hand like a smartphone and easily packs into purses and backpacks.**
- Versatile – Use SafeAir Mini like a traditional plug-in, or use the included USB cord for on-the-go!**

What are the Benefits of the Added Plasma Technology?

For those sensitive to the scent of electronically generated ozone, the new SafeAir™ Mini X2 design offers an alternative mode using advanced plasma technology. It destroys germs, bacteria, and VOCs like ozone – just at a slower rate with no added aroma. With the innovative SafeAir™ Mini X2 design, you can select your preferred purification method at the touch of a button. See "General Operation Instructions" to learn how to activate PLASMA MODE.

How Does SafeAir™ Technology Relate to Nature?

Who doesn't love the smell of naturally fresh air? Even with years of industrial pollution, chemical emissions, increased pollen levels, and catastrophic events like wildfires, Mother Nature has a unique process that uses the power of the sun and wind to add energized elements to the environment. These elements actively latch onto airborne pollutants to break them down and alter them to a much cleaner state. SafeAir™ Mini X2 technology mimics this natural process in an efficient, compact design for your indoor spaces. Each unit dispenses electronically generated elements, just like those in nature, throughout the room to give the indoor air a fresh, energized feeling - with no chemicals or filters required!

Can SafeAir™ Mini X2 Remove Viruses in the Air?

For decades, scientists have established solid conclusions regarding the power of active purification technology and its ability to destroy microbial pollutants. Using advanced (and micro-sized) technology, SafeAir™ Mini X2 produces and generates a powerful combination of essential air vitamins, activated oxygen and optional plasma to restore indoor air and sweep your space of irritating particulates.

What Industries Use This Technology?

Similar technology has been used for decades in the medical field, industrial food production, water purification and much more. SafeAir™ Mini was designed as a compact way to enjoy this powerful purification technology at home and on-the-go - and at a much more affordable cost!

Is SafeAir™ Technology Better Than HEPA?

Unlike bulky and costly HEPA systems, SafeAir™ Mini X2 doesn't use or require filters because they are limiting and can release the same pollutants back into the air. SafeAir™ Technology is a proactive designed system completely different than outdated passive filter designs. This means that SafeAir™ Mini X2 saturates your indoor air continuously to destroy pollutants and restore natural freshness. No filters, no chemicals, and no hassle required!

How Often Does the Filter Need Changed?

Good News... With SafeAir™ Mini X2, there are no replacement filters or cartridges required! Filters can be counter-productive as they can often release pollutants back into the air. SafeAir™ Mini X2 uses reactive technology to allow for indoor purification up to 650 square feet without the use of filters or cartridges.

What is the Lifespan of SafeAir™ Mini X2?

Ultimately, the life of any air purifier will depend on the air quality in the space where it is used. To extend the life of your air purifier and enjoy its benefits continuously, please periodically check the fan opening in the back of the unit and the air outlets on the front of the unit to keep it clear of dust, hair or debris. We also recommend that the unit be kept away from areas of high humidity or moisture to avoid internal corrosion.

SafeAir™
